smart Documents

Microsoft 365

Create Documents Directly in Microsoft Teams and SharePoint

With SmartDocuments integrations, you can work in your familiar Microsoft environment effortlessly. No switching between systems, just launch directly from Teams or SharePoint. This allows you to maintain control over your document flows and save valuable time.

Working Cleverly in Microsoft Teams

Work in-app within Teams: choose the document you need to create, fill in the required details, and generate a professional document without leaving the environment. The document is securely stored in your chosen location, entirely within Teams.

Efficiently from Microsoft SharePoint

Start SmartDocuments directly from SharePoint. The generated document is automatically saved in the same folder, including metadata. This ensures that documents always remain organized, easy to find, and compliant with the agreed structure.

Work in your Microsoft 365 environment and quickly create error-free documents, always correctly stored and with consistent results.

Discover how simple and powerful our integrations are. Request a demo!
